

How to Update the Websites

Simon's Interactive CV — both sites, step by step

Overview

There are two sites: the **VC site** (for investors) and the **Operator site** (for founders and hiring managers). Each has its own content file. Edit the right file, run one build command, push — Netlify handles the rest.

Site	Edit this file
VC site	source/content-vc.md
Operator site	source/content-operator.md

Step 1 — Edit the content file

Open the relevant file from the table above in any text editor. Each piece of content follows the pattern **fieldname: your text here** on a single line. Edit the value after the colon.

Fields you'll edit most often:

Field	What it controls
preview	One-line teaser shown on the timeline card
summary	Main paragraph visible when a milestone is expanded
learning	Key takeaway shown below the summary
funFact	The fun fact shown at the bottom
label	Short tag shown above the milestone title
role	Job title displayed on the card

Rule: field values must be a single unbroken paragraph. No blank lines within a value.

Step 2 — Run the build

Open Terminal and run:

```
cd "/Users/simonhuber/Documents/Claude workspace/Projects/Interactive CV" && node source/build.js
```

You should see:

```
[build] Operator site → Deploy-operator/index.html (68 KB)
[build]   milestones parsed: 6
[build] VC site      → Deploy-vc/index.html (70 KB)
[build]   milestones parsed: 6
[build] Done.
```

If you see an error, nothing is deployed. Fix the issue in the MD file and re-run.

Step 3 — Push to GitHub

Still in Terminal, run the command below. Update the message in quotes to describe what you changed. Netlify detects the push and redeploys both sites automatically — takes about 30 seconds.

```
git add . && git commit -m "describe what you changed" && git push
```

Never edit the `Deploy-operator/` or `Deploy-vc/` folders directly. They are auto-generated and will be overwritten on the next build.
